

Beam trajectories calculated by TOSCA in a vertical plane for 3 GeV electrons.

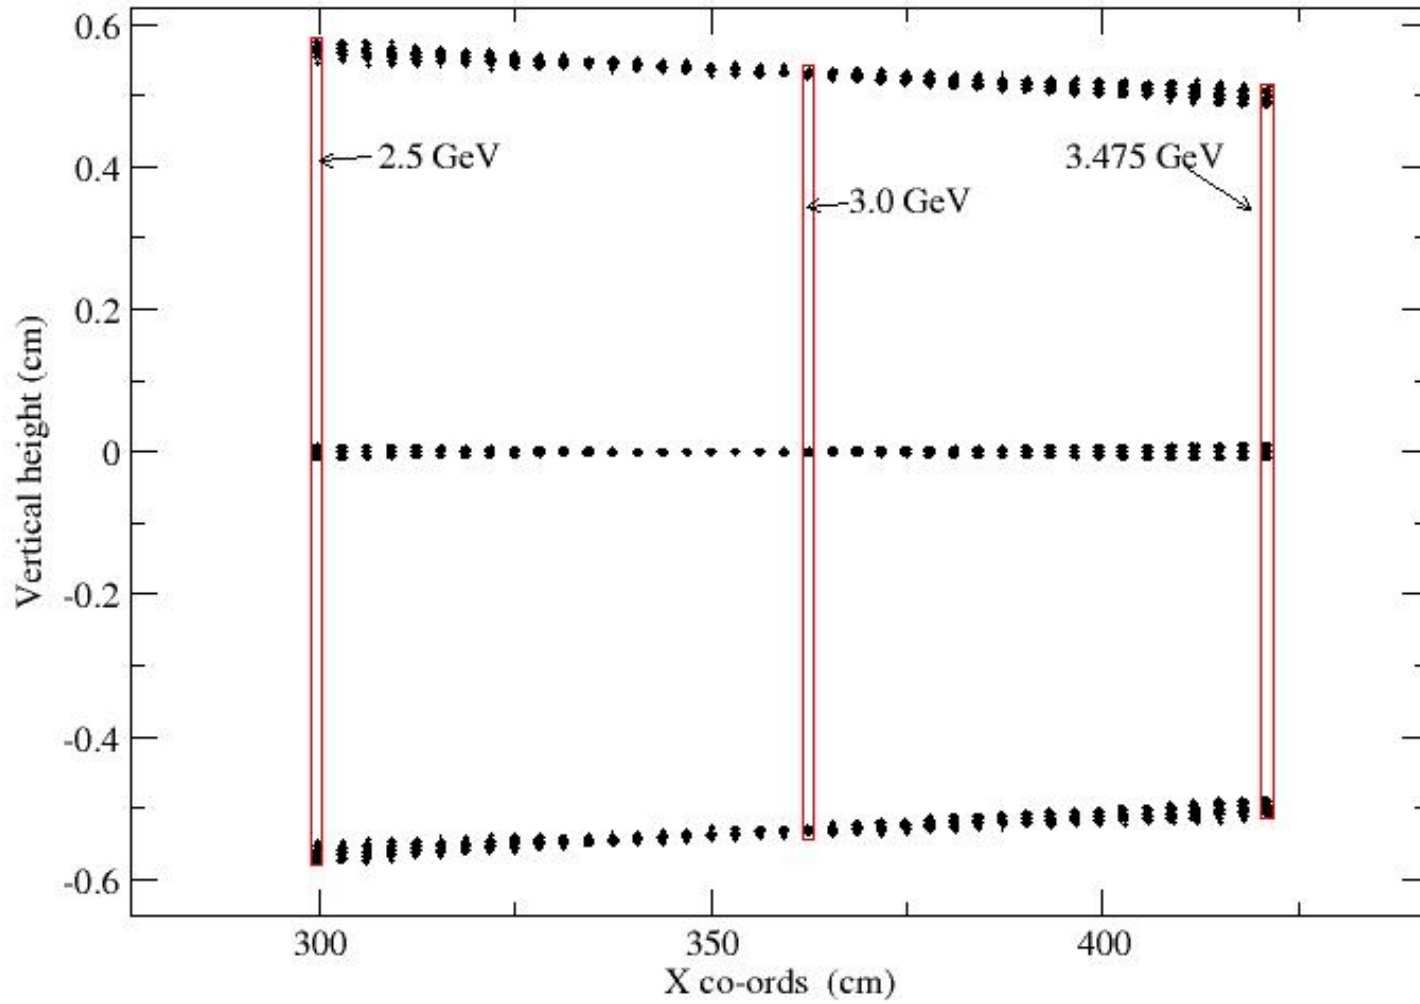

Without quadrupole

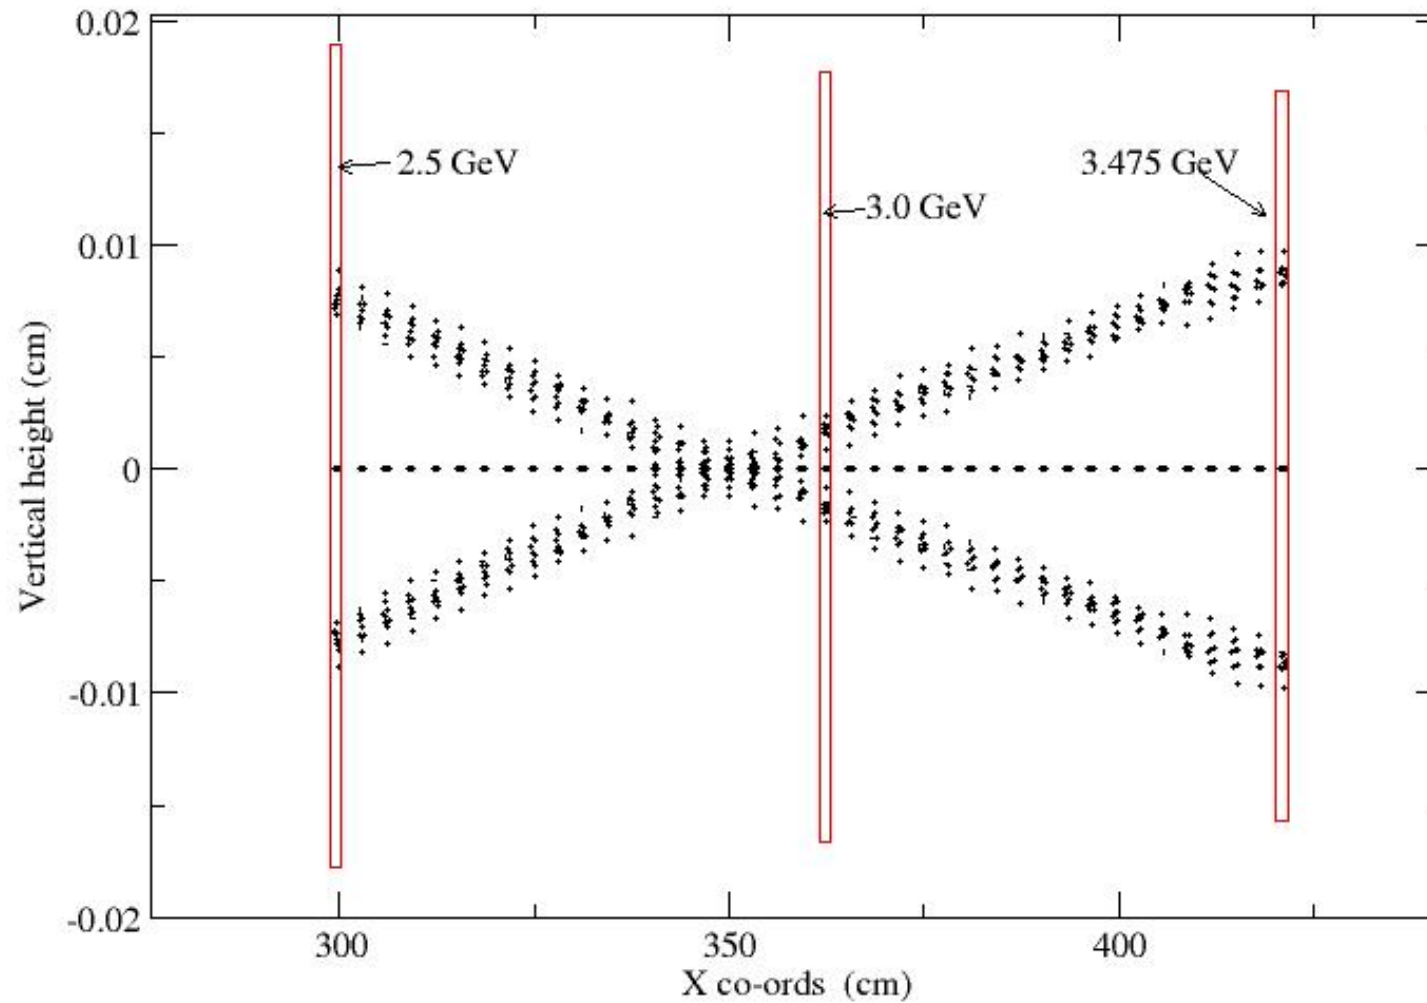

With quadrupole

Beam spot profiles at the focal plane for the two identical dipoles tagger (with the quadrupole adjusted to focus at 3 GeV). (For each energy, 81 trajectories have been used.)

Same as prevision plot, with vertical scale amplified.

Beam spot profiles at the focal plane for the two identical dipoles tagger (with the quadrupole adjusted to focus at 4.3 GeV). (For each energy, 81 trajectories have been used.)
